

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Prionapteryx nebulifera.—This Pyralid occurs at Yaphank, Long Island, N. Y., where I found its silken, sand-grain-coated tubes, on small huckleberry bushes on May 30, 1911, and again on May 18, 1913. Previous records are from the southern states and the Pine Barrens of New Jersey.—WM. T. DAVIS.

A CORRECTION.

Line 5 from bottom on page 148 of the June number pertains to *Trichopodopsis* and not to *Trichiopoda*. It should read:

Type, *Musca (Dictya) pennipes* J. C. Fab.

Trichiopoda Latreille.

Synonyms, *Trichopoda* auct. pt. *Polistomyia* Townsend.

Parasitic in Acridiidae (*Dissosteira*) so far as known. Deposits flat-oval macrotype eggs on host. Described in Tax. Musc. Flies (1908), pp. 132-133.

PROCEEDINGS OF THE NEW YORK ENTOMOLOGICAL SOCIETY.

MEETING OF MAY 20.

A regular meeting of the New York Entomological Society was held May 20, 1913, at 8:15 P. M., in the American Museum of Natural History, Vice-President Charles L. Pollard in the chair, with 27 members and two visitors present.

Mr. Schaeffer exhibited specimens and spoke on the North American species of the genus *Rhizophagus*, referring particularly to the holoarctic distribution of some species, leading to the discovery of some heretofore unsuspected synonymy, as in the case of the species he had described as *robustus* from Long Island, New Jersey and Kentucky, which is identical with the European *parallelocollis* and *dimidiatus* which is the same as the European *dispar*. Mr. Schaeffer described some of the characters employed which indicate specific differences, the dilation of the second stria near base, the apparently ten-jointed antennæ, the spines or teeth of the tibiæ, and the larger head of the male, especially noticeable in *cylindricus*, and referred to his correspondence with Colonel Casey, Mr. Chas. Liebeck and Mr. A. Méquignon, who has written on the European species and recently described *R. fenyési* and *R. grouvellei* from the Pacific coast. He regretted that the description of a few species from unique examples cast some doubt on their validity and said
